

DUBAN ZULUAGA JARAMILLO

dev@soydz.com — linkedin.com/in/dubanzuluaga — github.com/soydz — soydz.com

PROFESSIONAL SUMMARY

Fullstack Software Engineer building end-to-end web applications with Java, Spring Boot, and React. Experienced in microservices design, Kubernetes deployments with GitOps, and shipping intuitive, reactive interfaces. Takes products from initial architecture to production with automated CI/CD.

TECHNICAL SKILLS

Backend: Java 21, Spring Boot 3, Spring Security, Spring Cloud Gateway, GraphQL, REST APIs, JPA/Hibernate, RabbitMQ, WebSockets (STOMP)

Frontend: TypeScript, React 19, Next.js, Tailwind CSS, shadcn/ui, TanStack Query, Vite

DevOps & Cloud: Docker, Kubernetes (K3s/OpenShift), ArgoCD (GitOps), GitHub Actions, Nginx, SonarCloud, GHCR

Tools & Practices: Git/GitFlow, Agile, OpenAPI, CI/CD, English (Professional Proficiency)

CERTIFICATIONS

Red Hat System Administration I (RH124)	November 2025
--	---------------

Red Hat OpenShift Development I (DO188)	November 2025
--	---------------

TECHNICAL PROJECTS

Tracely	Fullstack Developer	Feb – Jun 2026
----------------	---------------------	----------------

Type-safe wealth tracking platform with analytics, budgeting, and production deployment.

- Built a finance platform with Next.js, React 19, and TypeScript using a domain-driven, feature-based architecture.
- Enforced end-to-end type safety with Zod schemas and TanStack Query, drastically cutting runtime errors.
- Shipped interactive dashboards with date-range filtering and budget trackers; deployed to tracely.soydz.com with zero-downtime CI/CD.

Supermarket Sales Management	Backend & DevOps Engineer	Jul – Dec 2025
-------------------------------------	---------------------------	----------------

B2B RESTful API for multi-chain supermarket sales control, deployed on Kubernetes via GitOps.

- Built a sales API with Spring Boot and PostgreSQL, optimizing relational queries for multi-chain inventories.
- Deployed on K3s with an ArgoCD GitOps workflow, letting the cluster auto-sync manifests directly from GitHub.
- Guaranteed database durability with StatefulSets and persistent volumes, and enforced quality gates via SonarCloud in CI.

FleetGuard 360	Fullstack Engineer	Feb – Jun 2025
-----------------------	--------------------	----------------

Real-time fleet monitoring platform built on a 6-service microservices architecture with Docker & Nginx.

- Architected a fullstack platform with Spring Boot 3 and React 19, coordinating 6 containerized services behind an Nginx reverse proxy.
- Built a reactive dashboard consuming WebSocket streams so operators see satellite data and alerts instantly, without polling.
- Decoupled alert processing with RabbitMQ, keeping the main API responsive during high-load tracking spikes.
- Secured access with Spring Cloud Gateway and stateless JWTs, enforcing role-based isolation for admins, operators, and drivers.

EDUCATION

Universidad de Antioquia	Medellín, Colombia
---------------------------------	--------------------

B.S. in Systems Engineering	2023 – Present
